

ASPENHILLS CONSULTING, INC.

CAPABILITY STATEMENT

Company Overview

Aspenhills Consulting is an advanced process solutions and systems provider for Owners and Professionals in the Design/Construction industry. Our experience shows that the greatest value of BIM and VDC Processes can only be realized when they are applied in a coordinated, cross-team environment. We act to augment your staff to ensure that designers and contractors comply with specified standards, act as your interface with the designer and contractor BIM Managers, and ensure that you receive full value from the BIM model through a detailed BIM Execution Plan. Aspenhills Consulting can also act as the interface between the ultimate facility operators and the design/construction team to collect operational data that the Facilities Management System will require, but is not usually included in the construction model.

We also bring efficiency to owner's facilities operations through the implementation of advanced technologies and processes.

Past Performance

The owners of Aspenhills Consulting have over 45 years combined senior management experience with large general contractors on heavy/industrial/commercial projects for both private and government owners. Our experience includes over \$20 billion of projects for entities such as Army Corps of Engineers, Los Alamos National Labs, Sandia National Labs, National Renewable Energy Labs, the U.S. Air Force Academy, University of Colorado Hospital, Hewlett Packard Corporation, Martin Marietta Corp., Apple Computer, and Colorado Department of Corrections. As part of this experience, our personnel were directly responsible for the implementation of advanced BIM/VDC tools and processes throughout the design and construction process. The owners of Aspenhills Consulting are recognized experts on BIM/VDC both regional and national.

Current clients include the Denver Metro Wastewater Reclamation District and Wings Over the Rockies.

Key Service Offerings—*Education To Implementation*

- Write and Implement BIM/VDC Standards and Unique Project BIM/VDC Process Execution Plans
- Independent BIM Process Agent for Project Owner
- Project BIM Leader
- 2D to 3D Model Conversion
- Field Construction Uses of BIM
